

DAY & NIGHT ILLUMINATED SIGHTS

The challenge of perfecting traditional iron sights is not straight-forward. Whether it's pistol, modern sporting rifle, shotgun or sub-machine gun, the integration of self-illuminated components enhances your performance no matter the time of day. Meprolight has taken a steady and revolutionary developmental path introducing new and innovative concepts of point of aim solutions and lighting technologies to mitigate less than ideal conditions. The use of —Tritium for “always-

on” night illumination, Fiber Optic for independent day time illumination and power saving LED technology with special light sensors — are used to enable the shooter to perfect their performance in any shooting situation. Meprolight is the leading designer, manufacturer, OEM supplier, and distributor of Self-Illuminated sights for – pistols, rifles, shotguns and sub-machineguns – day, low-light or nighttime conditions.

MEPRO HVS

Highly Visible Day/Night Self-Illuminated Sights

Mepro HVS fixed pistol sight features an extremely bright contrasting colored ring front sight. Shooters can select from one of three colors— Green, Yellow or Orange—for the front sight. The tritium is illuminated green to provide low-light and nighttime aiming capabilities. The contrast in colors of the two components helps the shooter focus on the front sight quicker, which is critical in defensive and competitive shooting.

Proven advantages:

- > Large and colored front sight ring
- > The Brightest Tritium night sights
- > Available for various handgun models

Available colors:

MEPRO FIXED SIGHTS

Self-Illuminated Pistol Sights

Meprolight is the world-leader in OEM and after-market self-illuminated sights for handguns. Designed to replace existing front and rear sights, the self-illuminated sights enable the user to confidently aim and engage the target under any lighting situation. The highly visible

Meprolight Tru-Dot™ sight dots are perfect for day light, low-light and night time conditions. Meprolight offers fixed, suppressor height, orange, yellow or green color combination models for over 24 manufacturers including Glock, Heckler & Koch, SIG, Smith & Wesson, Springfield Armory, IWI, Ruger and CZ.

MEPRO SUPPRESSOR HEIGHT SIGHTS

Self-Illuminated Pistol Sights

Proven advantages:

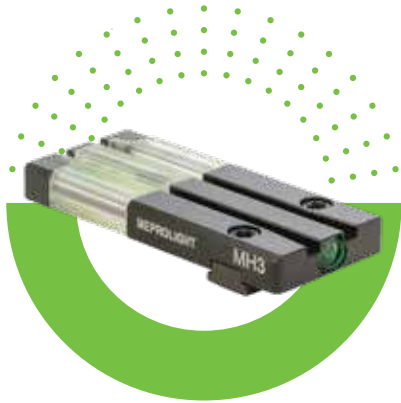

- > No batteries - no switches - always ready for action
- > Daytime confidence under low light conditions
- > The brightest night sights available today

Available colors:

MEPRO FT BULLSEYE

Innovative Fiber-Tritium
Optical Pistol Sight

Meprolight's engineering team utilized a patented optical illumination application to create the Mepro FT Bullseye—the smallest reflex style optic for pistols—featuring a bullseye point of aim indicator; highly visible, day, low-light or night time. The fiber-optic provides bright illumination during the day and the premium-grade tritium provides instant illumination in low-light and night time conditions. No batteries needed and always on, always ready.

The Mepro FT Bullseye is a low profile, single rear sight that aligns the point of aim when the self-illuminated dot and circle create a bullseye. Shooters are able to get on target faster. With this inventive design, there's no need for the front sight; it's all in the dot. When the dot is centered in the circle, you're on target.

MEPRO FL BULLSEYE

Innovative Fiber-LED
Optical Pistol Sight

Mepro FL Bullseye presents the same features as the Mepro FT Bullseye where daytime illumination is provided by fiber optic and in low-light or nighttime conditions, it is powered by an integrated battery. The advanced sight features a light sensor that automatically adjusts to changing light conditions providing the shooter with a bright point of aim at all times.

The low-profile design allows the shooter to pull the gun from the holster without having to worry about snagging a shirt or jacket. It simply installs in the pistol's dovetail and fits most holsters.

Proven advantages:

- › Smallest optical sight in the world based on patented optical illumination
- › Superior visibility in all lighting conditions
- › Fast and intuitive target acquisition
- › Simple, easy installation on existing pistol dovetail

MEPRO FT SINGLE DOT SET

Fiber-Tritium Optimized Day & Night Brightness

The Mepro FT Single Dot utilizes a front and rear point of aim in the form of illuminated dots for precise horizontal and vertical alignment on the target. Installation is quick and simple as the FT Single Dot fits most pistol dovetails.

MEPRO R4E

Optimized Duty Sights

The Self Illuminated Mepro R4E sight was designed by two U.S. Army Special Forces veterans who saw the need for a specialized sight for both day and night to quicken target acquisition time—a necessity in defensive shooting situations. The lightweight, yet durable, Optimized Duty Sight features five key—three vertical, two horizontal— elements for sight alignment. The rear sight features two horizontal lines and one vertical line, which line up with the vertical line and the highly visible tritium dot on the front sight. The additional lines of the ODS design create a reticle effect and cause the eye to quickly and instinctively focus on the front sight.

Proven advantages:

- > Designed by decorated Special Forces veterans
- > Additional vertical and horizontal lines for optimum sight alignment
- > Tritium-based self-illumination for low-light shooting conditions
- > Vertical bearing surfaces designed to facilitate one handed cocking in dynamic tactical situations

Self-Illuminated Pistol Sights

Meprolight's engineering team designed the tritium enhanced Self-Illuminated pistol sights for the competitive shooter and those who demand more accurate shot placement. The windage and elevation adjustments on the rear sight allows shooters to zero in at different distances as well as compensate for bullet weight when necessary to achieve precise targeting. Designed to replace existing sights, the adjustable sights enable the user to confidently aim and engage targets under any lighting situation. The highly visible sight dots are perfect for day light, low-light and night time conditions. Meprolight offers adjustable, orange or green color combination models for Glock, Heckler & Koch, Sig Sauer Ruger and Smith & Wesson.

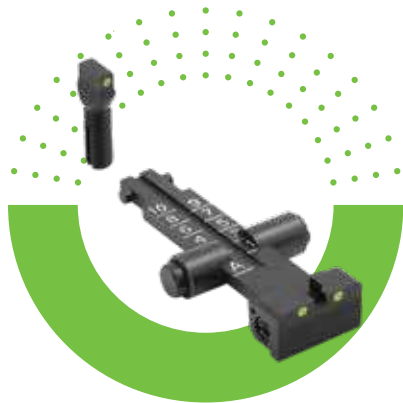

Proven advantages:

- > No batteries - no switches - always ready for action
- > Daytime confidence under low light conditions
- > The brightest night sights available today
- > Maintenance Free

MEPRO AR/AK/ SHOTGUN

Self-Illuminated Sights

Meprolight, the leading international manufacturer of tritium powered low light/night handgun sights offers the same critical aiming capabilities in its precision line of Rifle and Shotgun sights.

The AR15/M16/M4 green dot front and rear sights are specifically designed to fit all standard sights with the choice of thin front sight or standard sight for the A1 version. The AK sights are designed to fit and the AK & AKM pattern rifles. Shotgun sights are designed to fit select models of Remington, Mossberg and Benelli. Models for IWI Galil, Heckler & Koch and Ruger rifles are available as well.

The Rifle and Shotgun Night Sights and Mepro FRBS, like their handgun counterparts, are the solution to precise targeting under any lighting condition—daylight, low-light or night.

Proven advantages:

- > No batteries - no maintenance –always ready
- > Brightest night sights
- > Used by military & law enforcement

MEPRO FRBS

Self-Illuminated Flip Backup Sights

The self-illuminated Mepro FRBS—Front and Rear Backup Sights—are known for their durability and ease of use. The elevation sight pin can be quickly adjusted without tools. The low- profile, tritium-enhanced auxiliary sights are offered with either a two dot or four dot rear sight and quickly mount to any Picatinny rail. Day or night, if your main optic goes down, simply flip the FRBS sights up and stay in the fight.

Available configurations:

1. **MEPRO FRBS M4D** - Front and Rear Set of Flip-up Sights with Tritium - 4 Rear Dots
2. **MEPRO FRBS M2D** - Front and Rear Set of Flip-up Sights with Tritium - 2 Rear Dots
